Growing Savings While Helping The Environment

Lumen Solutions was originally hired by Sheridan Nurseries to develop a lighting plan for only one of their garden centres. The project went so well, that by the end of it we were asked to upgrade lighting in three different garden centres. The result, an annual savings of \$52,167 and a 248,375 reduction in annual kWh usage! It was a win-win for both Sheridan Nurseries and the environment.

Our certified professionals increased lighting throughout Sheridan Nurseries by installing weatherproof retail quality lighting with special lenses which provided superior light levels throughout all nursery areas. We also added more illumination in outdoor areas by retrofitting existing poles with high efficiency and custom modified area lights. For peace of mind, the equipment came with a 10-year warranty. Installation was rolled-out with minimal disruptions to Sheridan Nurseries busy operations which are open seven days a week.

Lumen Solutions' was pleased that our thoughtful lighting design successfully saved Sheridan Nurseries money in energy and maintenance costs, as well as increased lighting for both its employees and customers.
